

SPECIFICATION SHEET

SPECIFICATION SHEET NO.	R0422- CA55B016M226TA	
DATE	Apr. 22 2024	
REVISION	A1	Updated With Most Recent Data
DESCRIPTION AND MAIN PARAMETRICS	<p>SMD Conductive Polymer Tantalum Capacitors Industrial Grade, CA55 Series, EIA code 3528-19 (1210), Case B, L3.50*W2.80*H1.90mm</p> <p>Rated Voltage 16 Vdc, Capacitance 22μF, Tolerance ±20%</p> <p>ESR 400mΩ Max. Operating Temp. Range -55° C ~+125° C</p> <p>Package in Tape/Reel</p> <p>REACH/RoHS/RoHS III compliant</p>	
CUSTOMER		
CUSTOMER PART NO.		
CROSS REF. PART NO.	T520/T525/T530/T55/TCJ/TCM	
ORIGINAL MFG/PART NO.	Xiang Jiang/ CA55-B016M226TE400	
PART CODE	CA55B016M226TA

SMD CONDUCTIVE POLYMER TANT. CAP. CA55 SERIES

MAIN FEATURE

- Tantalum Anode Electrolytic Capacitor With Gelled Conductive Polymer As Electrolyte
- Easy Resin Molded Packing SMD Polarity
- J-type Pin Structure
- Low ESR And ESL With Good High-frequency Capacity Retention
- Failure Mode Of Non Combustion And Non Explosion.
- Equipped With Strong Surge Resistance, It Can Reduce The Rating By 10-20% In Low Circuit Impedance Switching Power Supply Circuits To.
- Moisture Sensitivity Level (MSL) III
- REACH/RoHS/RoHS III compliant
- Wide Operating Temperature Range -55 ~ +125°C
- Cross Most Competitors Parts in Market

APPLICATION

- DC/DC Converters, Audio Circuits, Power Inputs, Portable Electronic Products, Telecommunications Consumer Electronics, High-voltage Applications, Highly Integrated Microcircuit Modules, Microprocessor Decoupling And High Ripple Current Applications.

ELECTRICAL CHARACTERISTICS

- See Page 9~ Page 19 For Different Part Code

HOW TO ORDER

- Please follow up Part Code Guide and indicate pat code when you order or RFQ For Custom Specification .

SMD CONDUCTIVE POLYMER TANT. CAP. CA55 SERIES

SMD CONDUCTIVE POLYMER TANT. CAP. CA55 SERIES

LAND DIMENSIONS

Density Level A: For low-density product applications. Recommended for wave solder applications and provides a wider process window for reflow solder processes.

Note:

- Height of these chips may create problems in wave soldering.
- Land pattern geometry is too small for silkscreen outline.

CASE CODE	EIA METRIC	DIMENSION (MM)				
		W	L	S	V1	V2
B	3528-19	2.35	2.21	0.92	6.32	4.00

SMD CONDUCTIVE POLYMER TANT. CAP. CA55 SERIES

LAND DIMENSIONS

Density Level B: For products with a moderate level of component density. Provides Recommended Profile

Conditions for reflow solder processes.

Note:

- Height of these chips may create problems in wave soldering.
- Land pattern geometry is too small for silkscreen outline.

SMD CONDUCTIVE POLYMER TANT. CAP. CA55 SERIES

LAND DIMENSIONS

Density Level C: For high component density product applications. Before adapting the Min. land pattern variations, the user should perform qualification testing based on the conditions outlined in IPC - 7351).

Note:

- Height of these chips may create problems in wave soldering.
- Land pattern geometry is too small for silkscreen outline.

SMD CONDUCTIVE POLYMER TANT. CAP. CA55 SERIES

BASIC INFORMATION

ITEM	CHARACTERISTIC
Dielectric	Ta2O5
Electrolyte	PEDOT
Package Method	Epoxy Resin Molding (Semi-Sealing)
Case Color	Black (standard) or Yellow
MSL	III
Termination Finish	Standard solder-coated, Gold-plated option

STANDARD CHARACTERISTICS

PART CODE	CA55B016M226TA
Case Size Code	B
Case Dimension	L3.5*W2.8*H1.9mm
EIA Code	3528-19 (1210)
Capacitance Tolerance	±20%
Rate Temperature Range	85 °C
Category Voltage	11V
Category Temperature Range	125 °C
Operating Temperature Range	-55~ + 125 °C

SMD CONDUCTIVE POLYMER TANT. CAP. CA55 SERIES

APPLICATION NTOE

Storage Condition

1. Environmental temperature: 10°C ~ +30°C
2. Relative humidity no more than 60%
3. Storing period: No more than one and half year since the date of stocking.

APPLICATION GUIDE

Ripple Current and Voltage

If the ripple current is applied to the capacitor, the Joule heat (power dissipated) will be generated in the capacitor, so it will affect the reliability of the capacitor.

(1) Power Dissipated

The actual power dissipated can be calculated using the following formula: $P=I^2 \times ESR$Formula 1

P: Power dissipated (W); I: Ripple current (A); ESR: Equivalent series resistance (Ω)

(2) Ripple Current

Using the maximum power dissipation the ripple current can be calculated using the following formula:

$$I = \sqrt{\frac{P}{ESR}} \times K \times F \text{.....Formula 2}$$

K: Temperature derating factor..... Table 1; F: Frequency derating factor..... Table 2

ESR: Refer to the ratings of each specific product

Table 1: Temperature Drop Factor K

Temperature	Temperature Derating Factor K
25 °C	1
85 °C	0.9
125 °C	0.4

Table 2: Frequency Derating Factor F

Frequency (KHz)	10	100	500	1000
MnO2	0.80	1.0	1.15	1.20
Polymer	0.75	1.0	1.10	1.30

Using formula 3 to calculate corrugated voltage E: $E=Z \times I$ Formula 3

E: Ripple voltage; Z: Specific frequency impedance

SMD CONDUCTIVE POLYMER TANT. CAP. CA55 SERIES

Ripple Voltage

The ripple voltage applied to the capacitor is limited by three criteria.

- a) The power dissipation in the ESR of capacitor must not exceed Max.Dissipation Factor (DF) @25°C 100Hz.
- b) The positive peak AC voltage plus the DC bias voltage must not exceed the DC voltage rating of the capacitor.
- c) The negative peak AC voltage, in combination with the bias voltage, if any , must not exceed the permissible reverse voltage ratings presented .

Reverse Voltage

Solid tantalum capacitors are polarized devices , and applied reverse voltage can not be allowed . If the reverse voltage is unavoidable, a small degree of transient reverse voltage is permissible for short periods as follow.

25°C..... 10% of Max. rated voltage or 1V whichever is smaller

85°C..... 5% of Max. rated voltage or 0.5V whichever is smaller

125°C.....1% of Max. rated voltage or 0.1V whichever is smaller

Even under these restrictions, capacitors can not be used continuously in reverse voltage mode.

Working Voltage

(1) For general applications, using 50% of rated voltage of capacitors or less.

(2) When used at the power circuit, low impedance circuit , coupling circuit or witching circuit which has leakage current problems, please design the circuit with voltage under 30% of the working voltage (max 50%) to avoid the adverse effect of the surge current.

(3) Derating voltage when temperature above 85°C.

When the chip tantalum capacitor is used at 85°C or more temperatures, the reduced voltage (VT) is calculated from the following expression, however, note that the ambient temperature is not more than 125°C.

$$V_T = V_0 (V_R - V_C)(T - 85) / 40$$

VR: Rated voltage (V); VC: Derating voltage at 125°C; T: Ambient temperature (°C)

SMD CONDUCTIVE POLYMER TANT. CAP. CA55 SERIES

Protective Resistance

In a circuit (switching circuit, charge / discharge circuit, etc.) that has an instantaneous current, series resistance is at least $3\Omega/V$, this can improve the reliability of tantalum capacitors. If the capacitor is in a low impedance circuit, the voltage applied to the capacitor should be half or one third of the rated voltage.

Redundancy

MnO₂ tantalum capacitors will heat, and may cause fire and burn in the short circuit. This is determined by the situation, time and other factors. When the circuit is designed, it is possible to provide the best possible space to keep the tantalum capacitor reliability.

Test Condition

Ambient Temperature 25°C; Relative Humidity 60 to 70%; Air Pressure 800 to 1060mbar. Test and experiment, in order to make the test results not problems, it is necessary to will test the product after fully discharge.

This product is a polar components, testing or when using it is strictly prohibited to will is negative pick back, in order to avoid performance failure

Soldering

The SMD tantalum capacitor can be used for reflow soldering, which is not suitable for wave soldering and manual welding. The reflow temperature are $\leq 250^{\circ}\text{C}$, ≤ 3 seconds. If you must use manual welding, should use the melted solder to contact lead, and the electric soldering iron power should be less than or equal to 25W, temperature should be less than 300°C , welding time should be less than 3 seconds, can not use electric iron contact the product lead directly, and in particular, can not contact the product ontology directly. Recommended profile conditions for convection and IR reflow reflect the profile conditions of the IPC/J-STD-020D standard for moisture sensitivity testing
