## MAIN FEATURES

- Aluminum electrolytic capacitors, foil type
- V-Chip (Radial SMD) can-type construction
- Wide operating temperature range:  $-55\text{ }^{\circ}\text{C}$  to  $+105\text{ }^{\circ}\text{C}$
- High reliability and stable electrical characteristics
- Designed to meet IEC 60384 requirements
- Suitable for high-density surface mount applications
- Rated voltage range: up to 100 V
- Capacitance range: up to 2200  $\mu\text{F}$
- This product may serve as a functional alternative to comparable series such as Nichicon UFW, Chemi-Con VX/EX, and Rubycon ZS, subject to customer verification.
- Moisture Sensitivity Level (MSL): Level 1 (Unlimited)
- RoHS compliant per Directive 2011/65/EU and amendment (EU) 2015/863
- REACH compliant and Halogen-Free (HF)

*Image shown is a representation only. Exact specifications should be obtained from the product dimension.*

## APPLICATIONS

- High-density surface mount circuits, such as power supplies and lighting equipment
- Industrial equipment, including routers, network switches, measuring instruments, and control systems
- Consumer electronics, including audio amplifiers, smoothing circuits, and LED lighting

## ELECTRICAL CHARACTERISTICS

- Electrical characteristics for individual part numbers are provided on Pages 8–18.

## IMPORTANT NOTICE

- Specifications are subject to change without prior notice due to product improvements or technical updates.
- Customers are responsible for verifying the latest product information prior to use.
- All product parameters are subject to final confirmation by NextGen Components.

## HOW TO ORDER

- Please refer to the part numbering structure and specify the NextGen order part number FZ336M025HEHTA on all RFQs and Purchase Orders.

## CHARACTERISTICS

### Standard Atmospheric Conditions

The standard range of atmospheric conditions for making measurements/test as follows:

- Ambient temperature: 15 °C to 35 °C
- Relative humidity: 45% to 85%
- Air Pressure: 86kPa to 106kPa
- If there is any doubt about the results, measurement shall be made within the following conditions:
- Ambient temperature: 20 °C  $\pm$  2 °C
- Relative humidity: 60% to 70%
- Air Pressure: 86kPa to 106kPa
- As to the detailed information, please refer to following Table

### Operating Temperature Range

The ambient temperature range at which the capacitor can be operated continuously at rated voltage is -55 °C to 105 °C.

As to the detailed information, please refer to the mentioned table next pages.

| Reflow Soldering<br><br>Temperature Profile  | Welding Method     | Reflow Soldering | Soldering Iron | Wave Soldering       |
|  | The feasibility of | ○<br>Feasible    | ○<br>Feasible  | ⊗<br>Is not workable |
| Conditions for the use of lead-free reflow soldering.  |                    |                  |                |                      |
|  <p>The graph shows a temperature profile for reflow soldering. The y-axis is Temperature (°C) with points T1, T2, T3, and T4. The x-axis is Time (sec) with intervals t1, t2, and t3. The profile starts at a low temperature, rises to T1, then to T2, then to T3, and finally to T4. The time interval t1 is the time to reach T2, t2 is the time to reach T3, and t3 is the time to reach T4.</p>  |                    |                  |                |                      |
| <p>1) Methods the following<br/>           Reflow soldering: please follow the temperature condition during welding. If high temperature is used, please measure and inform the capacitor temperature and reflow soldering condition. The product size is larger and its rising temperature is slower. It is not necessary to adjust the temperature of the reflow solder in accordance with the size of the product. For example, the products of 4 and 10 will be installed in the PCB over tin furnace.</p> <p>2) Precautions for soldering tin: Related factors of reflow soldering temperature:<br/>           Product size: The product size is larger and its temperature rises slowly.<br/>           Product installation position: The temperature of PCB center is lower than that of PCB</p> <p>3) Reflow soldering<br/>           If possible, avoid reflow soldering twice.<br/>           If repeated reflux is unavoidable, measure and inform the first and second reflux temperature, and the time of reflow soldering</p> <p>4) Please do not 3 times of reflow soldering<br/>           Please follow the following conditions when soldering tin soldering:<br/>           Soldering iron maximum temperature: <math>350 \pm 5^{\circ}\text{C}</math>;<br/>           Welding time: 3+1/-0S</p> |                    |                  |                |                      |

## APPLICATION GUIDELINE

### CIRCUIT DESIGN

1) Please make sure the environmental and mounting conditions to which the capacitor will be exposed are within the conditions specified in catalogue.

2) Operating temperature and applied ripple shall be within specification.

3) Appropriate capacitors which comply with the life requirement of the products should be selected when designing the circuit.

4) Aluminum electrolytic capacitors are polar. Make sure that no reverse voltage or AC voltage is applied to the capacitors. Please use bi-polar capacitors for a circuit that can possibly see reversed polarity.

Note: Even bi-polar capacitors cannot be used for AC voltage application.

5) Do not use aluminum electrolytic capacitors in a circuit that requires rapid and very frequent charge/ discharge. In this type of circuit, it is necessary to use a special design capacitor with extended life characteristics.

6) Do not apply excess voltage.

(1) Please pay attention to that the peak voltage, which is DC voltage overlapped by ripple current, will not exceed the rated voltage.

(2) In the case where more than 2 aluminum electrolytic capacitors are used in series, please make sure that applied voltage will be lower than rated voltage and the voltage will be applied to each capacitor equally by using a balancing resistor in parallel with the capacitor.

7) Aluminum electrolytic capacitors shall not be used under the following environmental conditions:

(1) (a) Capacitors will be exposed to water (including condensation), brine or oil. (b) Ambient conditions that include toxic gases such as hydrogen sulfide, sulfurous acid, nitrous acid, chlorine, bromine, methyl bromide, ammonium, etc. (c) Ambient conditions that expose the capacitor to ozone, ultraviolet ray and radiation.

(2) Severe vibration and physical shock conditions that exceed specification.

Vibration test condition: 10-55-10Hz

Vibration frequency range : 10~55~10hz

Sweep rate : 10~55~10Hz/minute

Sweep method : logarithmic

Amplitude or acceleration : 1.5mm (max. Acceleration is 10G)

Direction of vibration : X, Y, Z direction

Testing time: 2 hours per each direction

Shock is not applicable normally.

If a particular condition is required, please contact our sales team.

8) The main chemical solution of the electrolyte and the separator paper used in the capacitors are combustible.

The electrolyte is conductive. When it comes in contact with the PC board, there is a possibility of pattern corrosion or short circuit between the circuit pattern, which could result in smoking or catching fire. Do not locate any circuit pattern beneath the capacitor end seal.

9) Do not design a circuit board that the heat generating components are placed near the aluminum electrolytic capacitor or on the reverse side of PC board, if that just under the capacitor.

10) Electrical characteristics may vary depending on changes in temperature and frequency. Please consider this variation when you design circuits.

11) When you install more than 2 capacitors in parallel, please consider the balance of current flowing into the capacitors.

12) While mounting capacitors on double-side PC board, the capacitors should be away from those unnecessary base plate holes and connection holes.

#### MOUNTING

1) Once a capacitor has been assembled in the set and power applied, do not attempt to re-use the capacitor in other circuits or application.

2) Leakage current of the capacitors that have been stored for more than 2 years may increase. When leakage current has increased, please perform a voltage treatment using a 1kΩ resistor.

3) Please confirm specifications and polarity before installing capacitors on the PC board.

4) Do not drop capacitors on the floor, nor use a capacitor that was dropped.

5) Do not deform the capacitor during installation.

6) Please pay attention to the mechanical shock to the capacitor by suction nozzle of the automatic insertion machine or automatic mounter, or by product checker, or by centering mechanism.

#### REFLOW SOLDERING

1) Please follow "Reflow Soldering Conditions" when use the part.

2) When an infrared heater is used, please pay attention to the extent of heating since the absorption rate of infrared will vary due to difference in the color and size of the capacitor.

3) Do not tilt lay down or twist the capacitor body after the capacitor are soldered to the PC board.

4) Do not carry the PC board by grasping the soldered capacitor.

5) Please do not allow anything to touch the capacitor after soldering. If PC boards are stored in stack, please make sure the PC board or other components away from the capacitor.

6) The capacitors shall not be effected by any radiated heat from the soldered PC board or other components after soldering.

7) Cleaning:

(a) Do not clean capacitors with halogenated cleaning agent. However, if it is necessary to clean with halogenated cleaning agent, please contact our sales team.

(b) Recommended cleaning method

Applicable : Any type, any ratings

Cleaning conditions: Total cleaning time shall be within 2 minutes by immersion, ultrasonic or other methods.

Temperature of the cleaning agents shall be 40°C or below. After cleaning, capacitors should be dried by using hot air for the minimum 10 minutes along with the PC board mounted. Hot air temperature should be within the maximum operating temperature of the capacitor. Insufficient dryness after water rinse may cause appearance problems, such as bottom-plate bulge and etc.;

Avoid using ozone destructive substances as cleaning agents for protecting global environment.

#### IN THE EQUIPMENT

1) Do not directly touch terminal by hand.

2) Do not link positive terminal and negative terminal by conductor, nor spill conductible liquid such as alkaline or acidic solution on or near the capacitor.

3) Please make sure that the ambient conditions where the set is installed are free from spilling water or oil, direct sunlight, ultraviolet rays, radiation, poisonous gases, vibration or mechanical shock.

#### MAINTENANCE AND INSPECTION

Please periodically inspect the aluminum capacitors that are installed in industrial equipment. The following items should be checked:

Appearance: remarkable abnormality such as pressure relief vent opening, electrolyte leaking, etc.

Electrical characteristics: capacitance, dielectric loss tangent, leakage current and etc., which are specified in catalogue or alternate product specification.

#### IN AN EMERGENCY

1) If you see smoke due to operation of safety vent, please turn off the main switch or pull out the plug from the outlet.

2) If you breathe the gas or ingest the electrolyte, please wash out your mouth and throat with water immediately.

3) If your skin is exposed to the electrolyte, please wash it away using soap and water.

#### STORAGE

1) Do not keep capacitor in high temperature and high humidity atmosphere. Storage conditions should be:

Temperature: 5°C~ 35°C Humidity : lower than 75% Place : Indoor

2) Avoid ambient conditions where capacitors are covered with water, brine or oil.

3) A storage products for longer than 12 months is not recommended. Within other effects, the terminals may suffer degradation, resulting in bad solderability. All products shall be used within the period of 12 months based on the day of shipment

#### DISPOSAL

Please take either of the following methods in disposing capacitors.

1) Incinerate them after crushing capacitors or making a hole on the capacitor body.

2) If incineration is not applicable, hand them over to a waste disposal agent and have them buried in landfills.

TAPE (Unit: mm), Applicable standard JIS C0806 and IEC 60286.

### PACKING METHOD

- Polarity: Anode on the opposite side of the feed hole
- The leader length of the tape shall not be less than 400mm including 10 or more embossed sections in which no parts are contained.
- The winding core is provided with an over 40mm long empty section

## IMPORTANT NOTES AND DISCLAIMER

### *RoHS Compliance*

This product complies with EU RoHS Directive 2011/65/EU and its amendment (EU) 2015/863 (RoHS 3). Restricted substances are below applicable threshold limits or permitted under exemptions. RoHS documentation is available upon request.

### *REACH Compliance*

Information regarding Substances of Very High Concern (SVHCs) under REACH is available. As the European Chemicals Agency (ECHA) periodically updates the SVHC list, customers should obtain the latest information prior to use.

### *Product Performance*

All parametric performance data is specified under the electrical characteristics and corresponding test conditions provided herein, unless otherwise noted. Performance may vary if operated outside specified conditions.

### *Specifications and Changes*

NextGen Components, Inc. ("NextGen") reserves the right to modify this document and the products described herein at any time without prior notice. Customers are responsible for verifying the most current product information prior to final design, purchase, or use.

### *Cross-Reference*

Cross-reference information is provided for reference purposes only and does not imply direct equivalence, endorsement, or guaranteed interchangeability. Customers are solely responsible for verifying electrical, mechanical, and environmental suitability for their specific applications. *NextGen* assumes no liability arising from product substitution or application-specific use.

### *Warranty and Limitation of Liability*

*NextGen* makes no representation or warranty, express or implied, regarding suitability for any particular purpose. *NextGen* shall not be liable for any indirect, incidental, consequential, or special damages arising from product use. No license is granted under any intellectual property rights of *NextGen*.

### *Restricted Applications*

*NextGen* products are not authorized for use as critical components in life-support devices, medical systems, or other safety-critical applications without prior written approval.

### *Returns Policy*

Customers must obtain a Returned Merchandise Authorization (RMA) number before returning products. Returns must be requested within 30 days of invoice date and products must be unused and in original packaging. Products designated as Non-Cancelable / Non-Returnable (NCNR) are not eligible for return.
